

Rail Car Netting

CarGoNet™ plastic containment netting is your most economical method to meet the Association of American Railroads requirements for top loading gondolas. Installed properly, **CarGoNet™** will help contain loose debris during the transportation of scrap metal. **CarGoNet™** is disposable, thus eliminating costly labor associated with reusable tarps and screens. This polypropylene load containment netting is:

- **Economical**
- **Easy to apply**
- **Complies with AAR open top loading rules**
- **Disposable; easily incinerated after use**

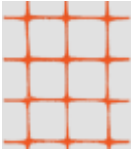

ECONOMICAL: A 48' gondola car uses only about \$15 of our ¼" opening **CarGoNet™** for complete coverage!

EASY TO APPLY: Drape **CarGoNet™** over a gondola car in a single pass. Gather the overhanging net under the lip at the top of the car and secure with cable ties. Use additional cable ties to secure netting to the sides.

DISPOSABLE: **CarGoNet™** is designed for a single use. Mills don't have to remove it - just rip it off during unloading. Lifting magnets or grapples can pull the load right out of the car without even untying the containment net. And **CarGoNet™** is made from polypropylene so it easily incinerates in the mill furnace.

Product Specifications

Rail Car Netting					
Product Number	Roll Width	Roll Weight	Roll Length	Core Size (inside diameter)	Color
OD5340 ¼" Mesh 	14'	44#	500'	4"	Orange
		160#	2500'	4"	
		300#	5000'	4"	
	17'	52#	500'	4"	Orange
		200#	2500'	4"	
		365#	5000'	4"
