

New Die Cutting Capabilities

Minneapolis, MN – Industrial Netting has expanded its custom fabrication offering with the addition of a 110 ton Freeman Schwabe high speed beam press. This model FM100M can die cut custom netting shapes up to 60 inches wide and 47 inches long.

The versatility of this machine was a key consideration to Plant Manager, Mike Rog. In the first month of production his team processed orders using polypropylene netting as thin as 0.020-inches (0.5mm) and weighing only 3 pounds per thousand square feet. They then shifted to polyethylene mesh over 0.100-inches (2.5mm) thick and weighing over 110 pounds per thousand square feet.

Industrial Netting offers customers a variety of custom converting solutions including custom sheeting, precision slitting, die cutting and sonic welding. While tolerances can vary with mesh configuration, ± 0.030 " is achievable for most custom cuts. For a full range of value added services visit www.industrialnetting.com/services or call 800-328-8456 to speak with a representative.

Industrial Netting was founded as InterNet, Inc. in 1981. The company produces a wide range of plastic netting products used in filtration, material handling, construction, agricultural, and industrial applications. The name was changed in October 2007 to more clearly reflect the company's mission.
